

# ADVANCE

SECURITY ALARMS LTD

**Your home, your security, your way.**

Wireless system with tablet interface

Wired system with keypad

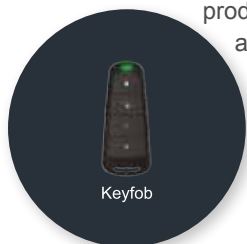

# Total security for you property

## Control Equipment

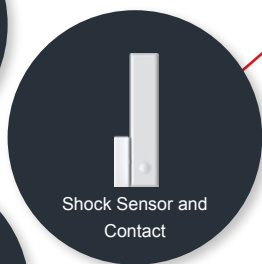

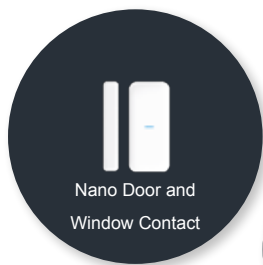

Our main control panel provides the centre for your security installation. Available for completely wire free installations or as a wired installation to suit the property or the needs of the home owner.

Our wired installation can have wireless products added providing a flexible hybrid solution with detection options to enhance security and safety along with secure radio key fobs to simplify the use of the system.

## Home Automation and Control

Using our SmartPlug with the HomeControlHUB app you can create scenes and automations to control appliances around your home. Your security system can do more than just protect what you hold dear. The HomeControlHUB app is only compatible with our Wire Free System.

## Perimeter Protection

We can protect your windows and doors with contacts and shock sensors providing layers of protection, an in-depth security system design.

Our nano contact, which can be hidden in UPV doors and windows for a discreet finish, Mini Contact and combination Shock/Contact are available in White, Brown or Anthracite (grey) to blend in to the doors and windows.

## Extending the capabilities of security control

Keeping your home safe and secure is as important to us as it is to you.

Our security systems deliver a security solution which we'll completely tailor to the needs of you property, while providing you with remote control and monitoring functions via our HomeControl2.0 smart device application.

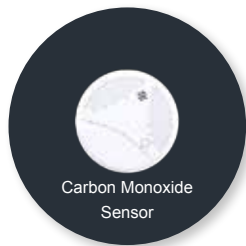

Built on a new and intuitive interface, HomeControl2.0 makes security easy, convenient and simple, while delivering extensive protection and peace of mind. With new features such as geofence alerts and biometric login, HomeControl2.0 offers a completely new level of monitoring, control and interactivity.

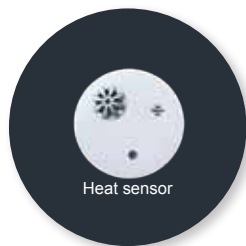

Panic Button

Smoke Sensor

Carbon Monoxide Sensor

Heat sensor

## Safety Devices

Safety of the premises occupants is also considered with life safety devices such as smoke and heat sensors, carbon monoxide sensor, water leak detection, panic buttons & medical alert devices.

Dual Technology Motion Detector

Motion detector

## Motion Detection

If you have pets, our detectors are designed to be tolerant of them; meaning we reliably detect intruders moving around within your property whilst your pets activity shouldn't cause any false activations keeping the system stable and secure.

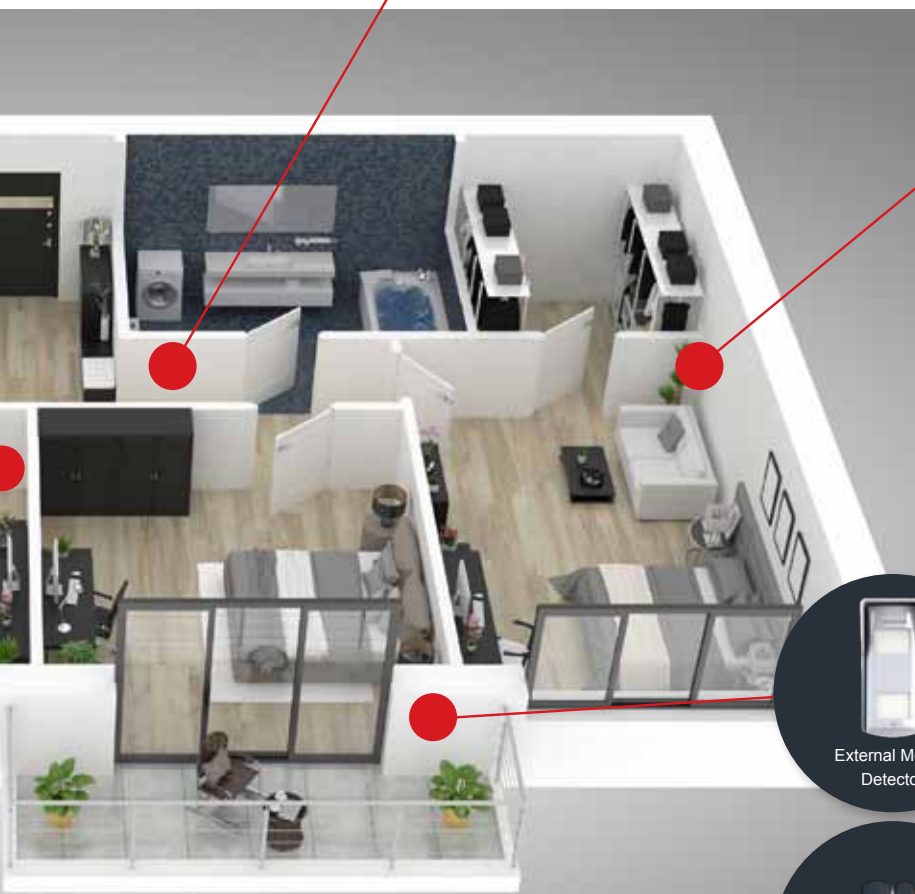

## External Coverage with Visual Surveillance

Taking the protection a step earlier than the standard security system; an external wire free motion detector containing three individual sensors working together to provide reliable detection.

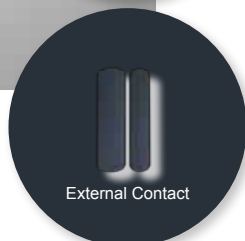

A contact designed specifically for the external environment protects gates and external building doors.

Integrating visual surveillance cameras completes the solution; any intrusion on to the property creates an alert direct to the user's smart phone app providing the early warning someone is on the premises.

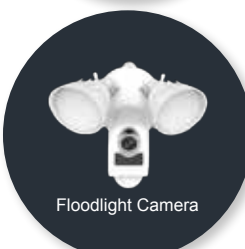

Conventional cameras or our new combined floodlight cameras provide discreet visual surveillance. Integrating cameras allows the user to see why the detector alert was generated for themselves; taking appropriate action to raise the alarm or respond to the site.
